

MODEL DA5

APPLICATIONS

“DO-ALL” concept allows application of all types of clean fluids. Designed primarily as a gaseous service valve, can be applied in liquid service applications where excessive cavitation or flashing is absent. Excellent for atmospheric industrial gases – GN₂, GOX, Ar, He, H₂, CO₂ – as well as a natural gas back pressure regulator. Used as a utilities – air, oil, water, steam – back pressure regulator. Corrosive and non-corrosive chemical services – gas or liquid – are possible with broad materials range. Special variations available for cryogenic gas or liquid service.

CAUTION

This is not a safety device and must not be substituted for a code approved pressure safety relief valve or rupture disc.

MODEL DA5

DO-ALL SERIES V BACK PRESSURE REGULATOR Spring Operated: 1/2" – 4" (DN15 - 100)

The Model DA5 is a high performance, spring operated, back pressure regulator with top-guided piston-cylinder that provides high flow capacity and high pressure drop capability. Internal trim design allows the same basic unit to cover a broad range of pressure settings. Performance approaches that of competitive pilot-operated designs in the basic design. Applied primarily in clean gaseous service, but also can be applied as a liquid or steam valve.

FEATURES

- | | |
|----------------------------|--|
| Versatile: | Five basic materials and multiple trim material combinations to select from. |
| Tight Shutoff: | Multiple composition materials provide Classes II, IV or VI inboard leakage rates. Designed as a soft-seated valve. |
| Capacity: | Highest in the industry. Allows smaller body sizes than competitors in majority of applications. |
| Pressure Drop: | Highest in the industry when coupled with high flow capacity. |
| Trim Design: | “DO-ALL” trim design provides <u>FTO</u> flow direction. Results in high <u>sensitivity</u> and <u>stability</u> . Internals are <u>cage</u> -contained within easily removable <u>quick change trim</u> . |
| Rangeability: | Basic valve gives outstanding rangeability due to close tolerances, balanced trim, and a broad range of elastomeric diaphragms and soft seats. Can be as high as 500:1. |
| Heavy-Duty Guiding: | Heavy top guided to maintain stability and increased diaphragm life. |

		177°	19.2	10.6	23.8
		204°	17.5	9.6	20.3

NOTE 1: Whenever body and topworks materials are mixed, the P vs. T ratings that should be applied are those which are lowest of the two materials.

Example: CS body, DI topworks; NPT end connections, 200°F temperature.

Because the topworks is not “end flanged”, use the DI limits of “400 PSIG CWP 370/200F” from above to compare to CS limits from DAG-1C values. The DI limits are lower, so ratings from DAG-1A MUST be used as the limits.

NOTE 2: Unless stated otherwise, design pressure is Maximum Allowable Working Pressure (MAWP) for Inlet and Outlet.

		177°	20.4	11.3	24.0
		204°	17.8	10.3	21.4

NOTE 1: Whenever body and topworks materials are mixed, the P vs. T ratings that should be applied are those which are lowest of the two materials.

Example: BRZ body, DI topworks; NPT end connections, ambient temperature.
Because the topworks is not “end flanged”, use the DI limits of "400 PSIG CWP 370/200F" from DAG-1A to compare to above DAG-1B values. The DI limits are lower, so ratings from DAG-1A MUST be used as the limits.

NOTE 2: Unless stated otherwise, design pressure is Maximum Allowable Working Pressure (MAWP) for Inlet and Outlet.

* See Minimum Temperature Ratings Table below.

NOTE 1: These pressure ratings may be further derated by limitations through the Pressure Equipment Directive (2014/68/EU). Whenever body and topworks are mixed, the P vs. T ratings that should be applied are those which are lowest for the two materials. **Example:** 600 lb. RF flanged **steel** body at 200 deg F maximum temp would have a preliminary inlet to 680 psig, but if fitted with a **ductile iron** topworks pressure rating is only 370 psig. Must derate both the inlet and outlet to 370 psig. (Note: Topworks pressure rating, same as NPT design outlet pressure rating for the selected topworks material and diaphragm type.)

NOTE 2: Maximum Design Pressure Rating for 2" Opt -41 limited by 0.065" wall thickness to 1200 psig.

300# Flanges are derated due to the bolting for these products.

1. Liquids experiencing <u>no</u> 2-phase flow at valve outlet will have same valve body outlet velocity as inlet velocity.										
2. Liquids experiencing 2-phase flow at valve outlet should have average velocity less than 150-200 ft/sec.										
3. Liquids experiencing 2-phase flow at <u>outlet pipe</u> should have average velocity less than 20-50 ft/sec.										
4. If valve outlet exceeds recommended limits, then can use external sensing to reach maximum limits.										
5. On gas service, a pilot operated prv can work with a outlet Mach = 0.75.
