MODEL D

MODEL D

PRESSURE REDUCING REGULATOR

The Model D is Cashco's primary general service, self-contained, pressure reducing regulator. Unit handles inlet pressures up to 400 psig (27.6 Barg) and outlet pressures from 2-250 psig (.14-17.2 Barg) in multiple spring ranges. Model D is utilized for the majority of industrial pressure reducing applications.

FEATURES

- Versatile:** Five body materials and thirty-one trim material combinations to select from.
- Tight Shutoff:** Composition seats of V-TFE, NBR, EPR, or FKM.
- Capacity:** Handles mid-range flow rates on a line size basis.
- Pressure Drop:** Handles mid-range pressure drops while maintaining good stability. Optional Stabilizer provides up to 350 psid (24.2 Bard) capability for gaseous service.
- Flow-to-Close Plug:** Incorporates the typical reducing regulator internal design.
- Incorporated Cylinder:** Plug is guided through its travel by the cylinder, which also serves to block harmful debris from entry to the seating surfaces.
- Overpressure Travel Stop:** In the event of downstream overpressurization, diaphragm over-travel is restricted by mechanical stops.

APPLICATIONS

Used in all types of fluids, including cryogenic liquids and gases, sour gas, industrial gases, chemicals, as well as the common industrial fluids - water, oil, steam and compressed air.

NOTE 1: Trim Designation Nos. in "boldface" are the most commonly used. Cashco, or its representatives may make recommendations or suggestions as to the suitability of certain trims for specific services. These are trims that have been used successfully in the past in similar applications. However, the user has final responsibility for materials selected.

NOTE 2: Cashco, Inc. does not recommend metal seated trim on any service where the flow will be dead ended down stream of the pressure reducing regulator.

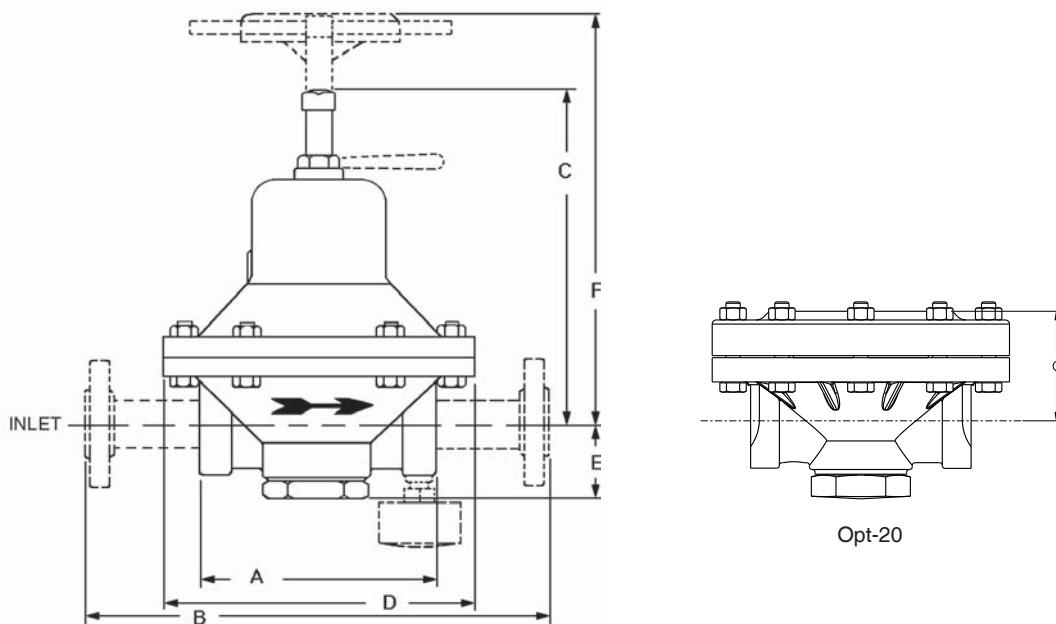

[#] In accordance with ASME B31.3 "process piping", do not use Cast Iron Body for hydrocarbon or flammable fluid service with inlet pressures greater than 150 psig (10.3 Barg) or temperatures greater than 300° F (149° C).

* NACE Trims for use w/ LCC Body Material Temperature Range -50 to +250°F (-46 to +121°C).
